

Comparative Analysis of Private Intermediate Care Facilities for Individuals with Mental Retardation (ICF/MR) And State Owned ICF/MRs (State Resource Centers)

I. Summary

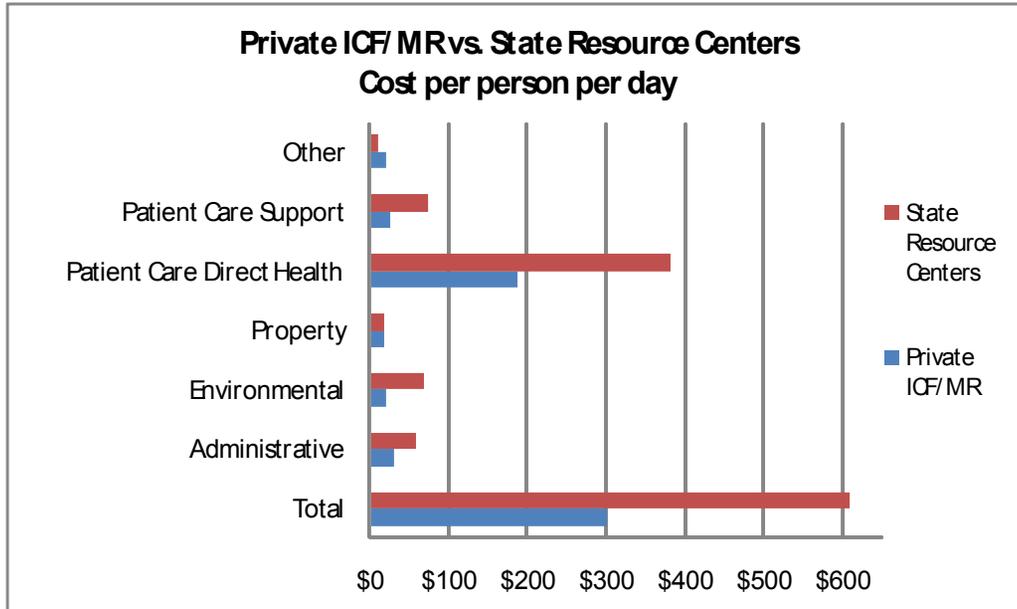

Key Considerations in comparing rate setting for private ICF/MR and State Resource Centers (SRC):

- The rate setting method is similar, apart from the rate cap on private ICF/MRs that is not applicable to the SRC.
- The amount of the rates are quite different, but for some key reasons:
 - Department of Justice. The DOJ consent decree has resulted in very significant resources in staffing of health care professionals to address the needs of the population. For example, SRCs have on staff full time Psychologists (1 per 26 clients), Speech Pathologists (1 per 34 clients), Occupational Therapists (1 per 41 clients), Physical Therapists (1 per 51 clients), Physicians (1 per 125 clients), and Psychiatrists (1 per 200 clients). Since the majority of private ICF/MRs are small (less than 15 beds), they would not have the volume to have this level of professional staffing in their costs. Also Resource Centers have infirmary on campus staffed with nurses and physicians (physician on-call during overnight hours) 24 hours to care for non-acute medical needs.
 - Salaries are higher at the SRC because of the influence of union contracts.
 - 74% of the difference between private and SRC ICF/MR rates is due to the amount spent on direct care (both direct health and support). This is due both to the number and type of health professionals, as well as salaries.
 - The SRC have been decreasing the census over the last 3 years, which results in spreading cost over a lower number of people.
 - While private ICF/MRs also serve 'difficult', 'expensive', and 'medically fragile' persons, the SRC often receive the individuals that have 'burned out' or exhausted the resources of other private ICF/MR placements.

Comparative Analysis of Private Intermediate Care Facilities for Individuals with Mental Retardation (ICF/MR)
And State Owned ICF/MRs (State Resource Centers)

The Charts below summarize the key differences between the rates of each type of facility.

- The SRC rate is about twice that of the Private ICF/MR rate.
- The major difference between the two types of rates is the amount of expenditures for Health Care services (Patient Care Direct Health), which would include nursing staff, therapists, psychologists, and physicians, and for Patient Care Support, which would include the direct care workers' costs.

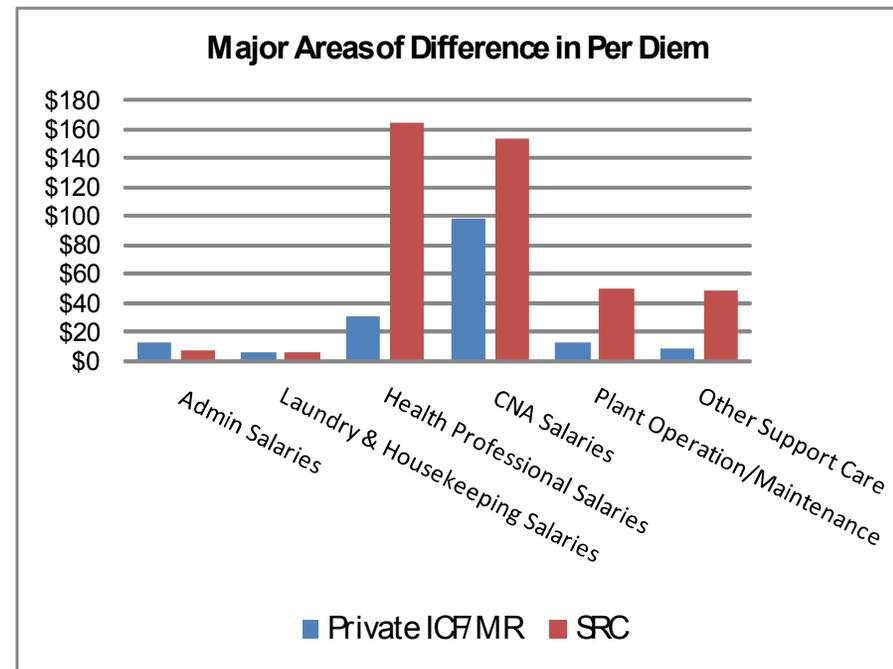

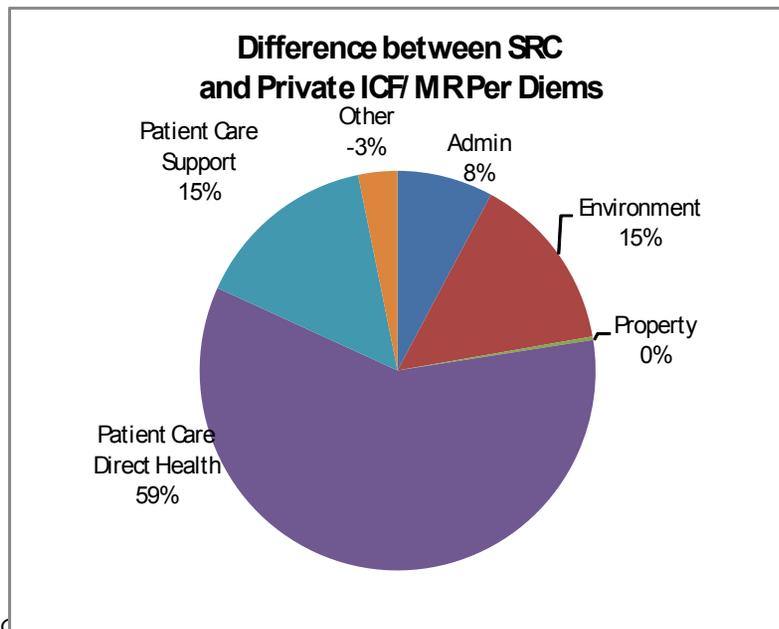

Administrative Costs = administrative salaries
 Environmental Costs = laundry and linen, housekeeping and plant operations
 Property expenses = depreciation, taxes, rent and interest
 Patient Care - Direct Health = nursing and CAN salaries, CAN training, contracted nursing services, Physical Therapy, Occupational Therapy, and Recreational Therapy
 Patient Care - Support Care = dietary other than food, food

Comparative Analysis of Private Intermediate Care Facilities for Individuals with Mental Retardation (ICF/MR)
And State Owned ICF/MRs (State Resource Centers)

Rate Comparison continued:

- Two categories (Patient Care Direct Health and Patient Care Support) account for 74% of the difference in rates. As noted above this is due to a much larger number of full-time health care professionals on staff at the Resource Centers (Therapists, Psychologists, Physicians, and nursing) than at the Private ICF/MRs. This is due both to the population served by the SRCs, and also due to large increases to comply with the DOJ Consent Decree.
- Also, Environmental costs are higher, likely due to the higher physical plant costs of the large and aging SRC buildings and grounds.
- Administrative due to the cost of the billing and recovery activity with the counties, which private ICF/MRs do not have to do.
- In all cases, salaries at the SRCs are higher due to the increased rates of pay and benefits resulting from State Employee Union contracts, which are not applicable for private ICF/MRs.
- If we look deeper at the cost differences we see in the right hand table that the amount spent on salaries is a key factor. This graph does not compare average salaries, but shows the amount spent on salaries. The differences would be due to both the number of health care professionals as well as the salary amounts.

II. Detailed Comparison of Rate Setting

	Private ICF/MR	State Resource Centers	Comments
Cost Reporting	<ul style="list-style-type: none"> • Use Financial and Statistical Report 470-0030 • Submitted no later than September 30 each year for the reporting period July 01 to June 30. 	<ul style="list-style-type: none"> • Use Financial and Statistical Report 470-0030 • The rate is calculated twice annually based on actual costs of operation that occurred during the previous six months based on a financial and statistical report inflated by the percentage change in the CPIU. 	Same Cost Report form. Costs are submitted more frequently for the Resource Centers.
Revenue Sources	<ul style="list-style-type: none"> • 99.23% through Medicaid payment. • Federal Medicaid funding at approximately 60% <ul style="list-style-type: none"> ○ Non-Federal Share – State Appropriation is approximately 6% ○ Non-federal share-Counties at approximately 26% ○ Non-federal share-client participation and other revenues at approximately 8% 	<ul style="list-style-type: none"> • Financial revenues for SRC-99.80% through Medicaid payment. <ul style="list-style-type: none"> ○ Federal Medicaid funding approximately 60% ○ Non-federal share-State Appropriation at approximately 20% ○ Non-federal share-Counties at 10%-The amount of the non-federal share that Counties can be billed is prescribed by Iowa Code. 	<p>Both are almost 100% financed by Medicaid. Resource Centers are 'at risk' for collecting the part of the State match that is owed by the counties. IME does that task for the private ICF/MRs.</p> <p>The State match for the Medicaid payment is appropriated to the Resource Centers directly and then it is transferred to Medicaid.</p>

And State Owned ICF/MRs (State Resource Centers)

			<p>years is the addition of departments and staff required to comply with the Department of Justice Consent Decree.</p>
<p>Cost Comparison - Administrative</p>	<ul style="list-style-type: none"> • 11% of the cost is spent on administration. • 7% of the costs are spent on environmental upkeep. • These are settings that include 4 person homes in the community up to smaller campus settings. 	<ul style="list-style-type: none"> • 9.5% of the cost is spent on administration. • 11.5% of the costs are spent on environmental upkeep. • There are higher costs associated with billing and collections from counties at the State Resource Centers, which increases the administrative costs. Medicaid only remits the federal share of payment rates and leaves the State Resource Centers to collect the federal share from counties. IME handles the county share collection for community ICF's/MR. • The State Resource Centers have a large campus setting. • The Resource Centers staff and maintain an on-campus infirmary 	<ul style="list-style-type: none"> • A greater proportion of costs at the SRC is spent for environmental costs. This may be because the SRCs have large campuses, large, older buildings that are more expensive to maintain than the private ICF/MRs, which are typically much smaller. • There is not enough detailed accounting information to make a complete comparison of what these costs. For all of the private facilities these differences even out over the entire population, but with only two State Resource Centers, we cannot make any general observations from that small sample size.
